

The Submersible boat trailer for the boatclub.

The Sublift 12 is the smallest version in our line of Sublifts, yet robust and reliable.

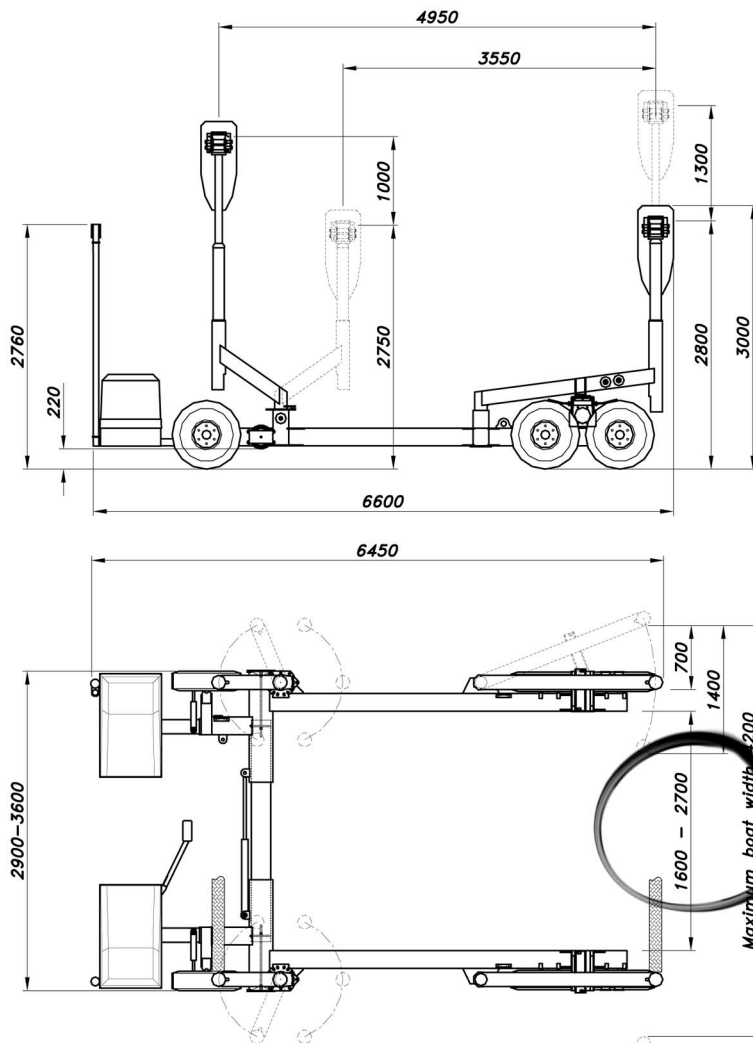

It now comes standard with features that earlier only was available on the larger versions, like hydraulic adjustable arms and electric slinglocks.

Its hydraulic flexible frame makes it easy to handle all types of boats up to 12 tonnes and to narrow its footprint whenever it is not in use to save space.

The Sublift is completely submerged below the water surface when landing and launching a boat.
