

The Self Propelled boat trailer in
a new design for larger vehicles

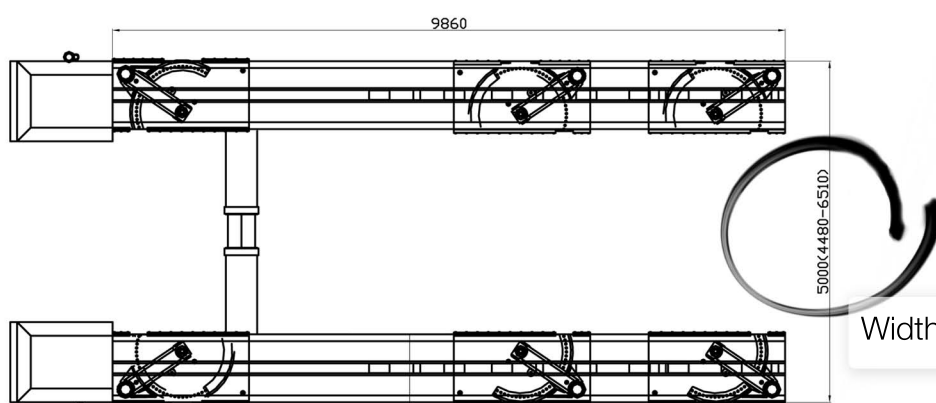

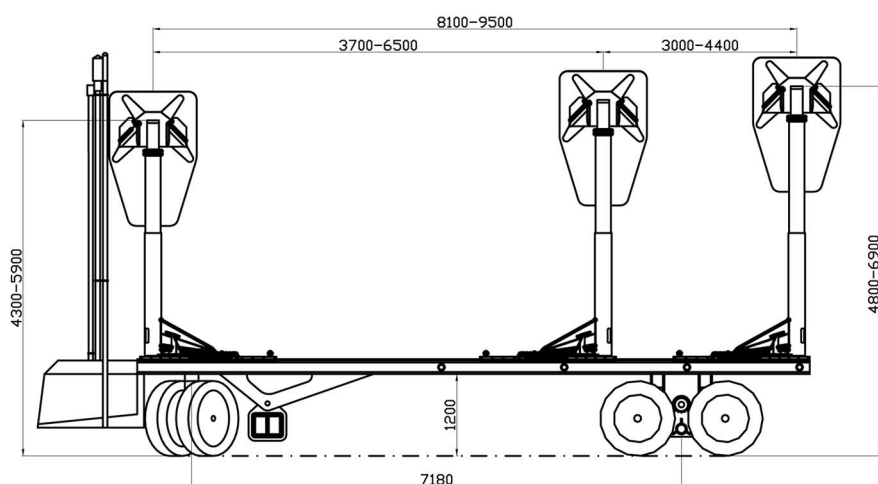

The Sublift 75 have been developed from our experience of a 65-ton version made especially for the Swedish marine forces.

This new design have been further refined to meet the requests for a flexible and easy manouvered Sublift for a larger group of boats.

Compared to our previous models of Sublift our new Sublift 75 have stepless movement of the positioning of the arms on the frame as well as dynamic rotation of the arms which gives even better precision in the placement of the lift straps for larger vehicles.

The Sublift 75 is a submersible All-in-One system from water to cradle.

-  Remote Controlled
-  Safe and Fast
-  Flexible Width
-  Submersible

Width can be customized on request

DATA

- Sublift 75T is designed for a maximum boat load of 75 ton
- Actual load of each sling is displayed in the remote control.
- Transmission is fully hydraulic powering the 8 rear wheels.
- Drive force is calculated for transport in ramp with an angle of 1:9 with max load.
- Wheel axles and hubs have a special seal that prevents the permeation of water.
- Speed control is stepless with a highest speed of 5km/h. The hydraulic engines have 2 gears.
- All functions is accessible from the remote control
- The lifting arms width and length is adjustable by hydraulics.
