

GRP Safety Ladders

Dura Ladders

Easy Install Low Maintenance Fibreglass

Dura Composites GRP (Glass Reinforced Plastic) Safety Ladders are made from high strength, low weight and non-conductive fibreglass. Dura safety Ladders come in 3 standard stock sizes.

Our fibreglass Safety Ladders are manufactured using our market-leading fibreglass pultruded profiles, which produce lightweight, chemically resistant, easily installed ladder solutions. The ladder stringers are pultruded for easy grip, with box sections. The ladder rungs have an anti-slip serrated surface and have fixing brackets, designed to attach the safety ladder to various marine structures.

Dura Composites' GRP Safety Ladders outperform conventional steel, aluminium and wooden alternatives across all key criteria thanks to their high strength to weight ratio, low maintenance requirements, corrosion, electrical resistance and low installation costs.

Manufactured from the Dura Profile structural beam range, we can make bespoke safety ladders as per customer requirements. Our experienced team will provide design support and CAD drawings from initial concept stage through to fabrication at our HQ facility.
